# SDL CITIZEN APP
Encourage citizens to engage and take action
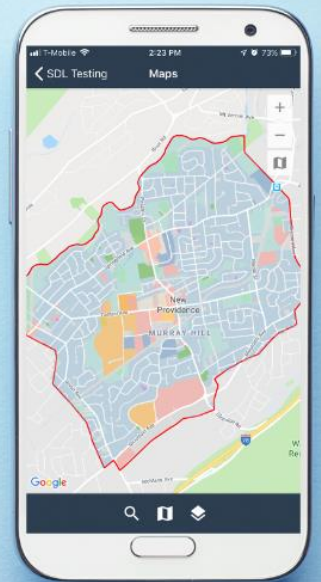

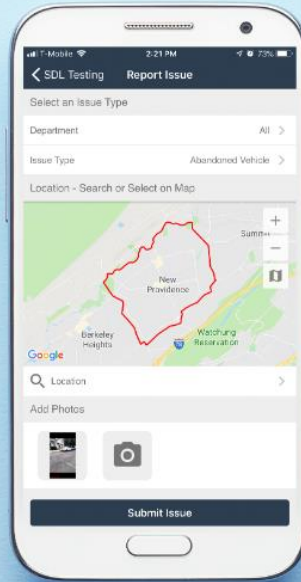

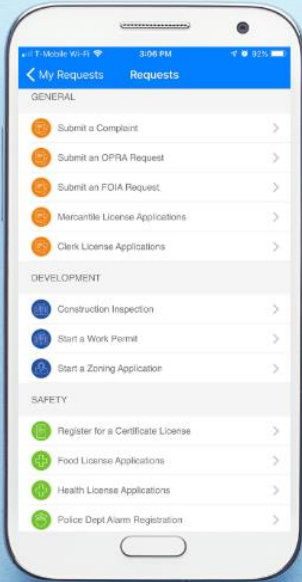

Why SDL

Spatial Data Logic (SDL) helps bridge the gap between municipalities and their constituents by providing visibility across departments, streamlining workflow for staff and enabling self-service access for residents.

SDL Citizen is a free mobile app where residents can access information, complete forms, schedule inspections, report issues and view a dynamic map of their municipality.

How We Help Empower Residents

TAKE ACTION
Provide residents with a list of the tasks they can complete by department. Some of the options include submitting requests, applying for permits, completing applications and registering alarms

SCHEDULE INSPECTIONS
Allow citizens to select their inspection type, suggest dates and include notes

ACCESS INFORMATION
Residents can access their property history, check the status of their requests, view their permits and receive town alerts

REPORT ISSUES
Encourage citizens to report issues to the relevant department such as debris, animal incidents and sanitation issues. Report fields include the issue type, location, photos and notes

GIS MAPS
An interactive municipal map helps residents navigate and search for pertinent information. Residents can overlay visual layers to the map such as terrain, traffic, property class and property value
