

SAVE TIME ON DATA ENTRY: PERIODIC INSPECTIONS

Periodic elevator inspections and tests such as Backflow Devices, 5 Year Bonding & Grounding and Annual Pools used to be a manual and time consuming process for Bernards Township.

Prior to switching to SDL, staff had to enter in information by device. This process was a huge undertaking for staff as they had to manually enter hundreds of devices each with their own set of payments, tests, inspections and certificates.

SDL's software allows Bernards Township to enter their Ongoing Application information by parcel, thus centralizing the information in one place. As a result, staff can now schedule inspections as a group, bill on one invoice and mass-issue certificates to one property.

CLIENT FEEDBACK

Dawn Neil
Code Enforcement

"As the saying goes "Work Smarter, Not Harder" this is what SDL has done for us. As we use technology to streamline processes and eliminate duplication of efforts our move to SDL was necessary...This is just one example of the many reasons we switched to SDL!"
